

MOBILE REFRIGERATION

Mobile Refrigeration Units ... The perfect solution for holding cold foods and transporting from central locations to feeding stations, banquet areas and satellite operations.

Refrigerators and freezers are not made equal! The unique environment of banquets and catering necessitates the demand for portable refrigeration. The resulting demands are harsh. Stationary or reach-in units “on wheels” are not made to take this kind of punishment.

Engineered to answer your most demanding needs, FWE’s all stainless steel heavy welded construction delivers performance and dependability you can count on. Built on a special one-piece stainless steel tubular frame, reinforcing members, design engineered and constructed to absorb vibration, shocks, and prevent refrigeration leaks.

FWE units have excellent “pull-down” times that are required to reach safe operating conditions and extra insulation to hold temperatures - even in transit. Oversized components also achieve rapid “recovery times once the unit has been moved and plugged back in, or during peak periods when the door is left open.

FWE’s on the move . . . using special components and designed engineered construction that ties the entire unit together into an extra rigid, high strength unibody performer that delivers a longer service life with the lowest maintenance in the industry.

- Low center of gravity compressor, allowing easy and safe transporting
- Compressor mounts, preventing vibration and absorbing shock
- Top mounted blower system, providing consistent top-to-bottom air flow
- High efficient condensing unit and coil, assures rapid “pull down” and recovery
- High density ultra-guard insulation prevents temperature loss and assures efficiency
- 304 Welded stainless steel double wall construction for longer life
- Fully welded stainless steel tubular base frame
- Full perimeter bumper offers solid protection of high impact non-marking vinyl inserted in extruded aluminum wrap-around frame channel

**“A, B, C’s”
to improve any
operation
and offer
flexible mobile
equipment:**

A

Always where you need it - from prep area to plating area, FWE refrigerators and freezers can plug into any 120 volt outlet and maintain safe operating temperatures.

B

Better food quality and safer food holding in almost any location, providing on-site refrigeration holding for banquets and catered events.

C

Capacity - dependable instant back-up capacity and increased operations efficiency in volume feeding, buffets, and cafeterias.
